

An Improved Packing Box

Abstract

The present invention generally relates to an improved packing box. A wall of the box member is internally set a line wall, which being shorter than a height of the wall, a thickness of the cover member is equal to a height difference of the wall and the line wall for the height of the cover member being as same level as a top of the box member while the cover member covering onto the box member. A frame board with lateral slots for inserting a beautiful drawing, a memorial photo or card is established on a top of the cover member and with a fluting, a flexible belt or a ribbon consolidates on lateral sides of the frame, or to put magnetic members on the cover member and the line wall for fastening by means of the belt or the ribbon, or to certainly fix the cover member on the packing box by way of magnetic force.
